

# End Site definition

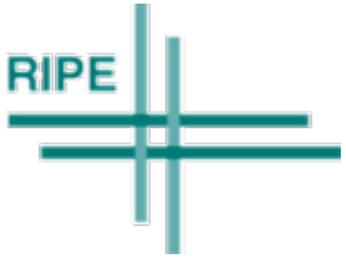

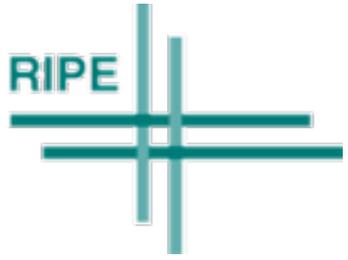

- An End Site is defined as an End User (subscriber) who has a business or legal relationship (same or associated entities) with a service provider that involves:  
...

- **Current implementation: one customer who has internet access at two locations has two End Sites**

- Questions:
  - Is the intention of the policy different?  
(we think the implementation is correct, but would like confirmation from the community)
  - Is this clear in the policy text?

- Next step:
  - Don't do anything
  - Change the policy
  - Clarify this in the Cosmetic Surgery project
